

Daptor 1 WIRELESS TELEPHONE ADAPTOR

Remote Broadcasts over a cell phone? Daptor One converts the 2.5mm headset jack on your wireless cellular phone to a modular phone line jack. This modular RJ11 jack connects directly to any JK Audio RemoteMix series mixer or any JK Audio innkeeper 1x Digital Hybrid.

FEATURES

- Works with many wireless phones
- Hybrid circuit minimizes echo
- No battery or AC needed
- Daptor One was designed for use with JK Audio products only. It does not supply the necessary ring voltage or talk battery which may be required by modems or other manufacturers' remote consoles.
- Daptor One is compatible with the following JK Audio products:
 - RemoteMix C+
 - RemoteMix 3
 - RemoteMix Sport (older units)
 - Innkeeper 1 and 1x Digital Hybrids

Daptor One was designed to take advantage of the increasing number of wireless phones that accept third party headsets and earpiece headsets. We've designed a circuit which emulates the electrical characteristics of these headsets. Daptor One will work with all wireless phones that accept generic third party headsets. Daptor One contains a mini hybrid circuit that converts these earpiece and microphone signals into a balanced RJ11 phone line signal. The mic signals from the RemoteMix are sent into the wireless phone, while the earpiece signals from the wireless phone are sent into the RemoteMix Headphones. The hybrid circuit minimizes cross talk between transmit and receive which would create unwanted echo on both the RemoteMix and far side of the call. You will continue to use your wireless phone to dial or answer the call, but you will use the microphones and headphones plugged into your RemoteMix during the call.

Specifications

Phone Line:	RJ-11 modular phone line jack
1/4" TRS Jack:	36" interface cable provided with 1/4" to 2.5 mm, 3-conductor plug
Size:	3.6" x 1.6" x 1.3" (9.2 x 4.1 x 3.3cm)
Weight:	6 oz. (170 grams)
