

BlueDriver-M3™ Wireless Audio Interface

User Guide

JK Audio

Welcome

Thank You

Thank you for purchasing the JK Audio BlueDriver-M3 Wireless Audio Interface. Please read this guide for instructions on setting up and using your new product.

Getting Assistance

If you have technical or application questions:

In the US & Canada, call us toll free at:
800-552-8346

All other countries dial: **815-786-2929**
(M-F 8:30-5:00pm Central Time Zone)

Email us at: support@jkaudio.com

Or, check out our FAQ section for answers to common questions.

Limited Warranty

BlueDriver is covered by a 2 year warranty to be free from defective workmanship and materials. To obtain service, contact JK Audio by phone or email for return authorization. Once authorized, you will carefully pack and ship the faulty product and all accessories to us. You will pay for shipping to us and we will pay for return back to you.

This warranty does not cover damages due to accident, weather, fire, flood, earthquake, misuse, unauthorized repairs or modifications, or damages occurred in shipping, only defective workmanship or materials.

There are no expressed or implied warranties which extend beyond the warranty here made.

Features

HD Voice*

Mini USB Power Jack

>10 Hours on Internal Li-Ion Battery

3 Pin Male XLR Output

1/8" (3.5 mm) Line Level Input

* **HD Voice.** While standard phone calls have a narrow bandwidth of 300 Hz to 3.4 kHz, HD Voice calls offer 50 Hz to 7 kHz bandwidth. The additional 1.5 octaves on the low end gives voice a more natural sound, while the additional upper octave dramatically improves speech clarity and intelligibility.

Wireless HD Calls. To take advantage of this extended bandwidth, both phones on the call must support HD Voice, and both phones must be on the same carrier, in coverage areas that support HD Voice.

Introducing the BlueDriver-M3.

The BlueDriver-M3 wireless audio interface uses Bluetooth® Wireless Technology to add wireless possibilities to your audio mixing console. Model M3 provides 2-way, full duplex voice band audio path when connected to a device using the Hands Free profile.

HD Voice is available on many third party headsets and cell phones. The 7 kHz audio bandwidth produces rich, natural voice clarity.

Additionally, music bandwidth stereo audio can be heard using the A2DP profile. Be aware that the standard A2DP music profile includes a 150 millisecond transmission latency.

Getting To Know your BlueDriver-M3

Mode Switch

In the Bluetooth world, a Master device, such as a wireless phone, computer, or music player, is connected to a Headset device.

Before you turn the BlueDriver on, be sure to set the **<Headset/Phone Switch>** to the correct position. If you change that switch while the unit is on, you will need to power the unit off, then power the unit back on before the change takes effect.

Select **<Headset>** if you will be using your BlueDriver with a *Bluetooth* enabled headset or any device that emulates a headset. Select **<Phone>** if you will be using your BlueDriver with a cell phone or other master device. See **page 17** for more information on Bluetooth profiles for different wireless applications.

Send Input

A 3.5 mm stereo line level input jack enables you to add audio from another source to this device. Both channels of this input will be sent to the Bluetooth device and not to the XLR jack. If you are connected in A2DP as the Master, you will be able to send stereo audio to a slave device. If you are connected as the Slave in HF mode, the two channels will be mixed together for transmission.

Connect Button

The **<Connect Button>** is used to initialize connections. See **pages 4-6**. This button is also used to disconnect and turn off the BlueDriver. See **page 7**.

Charging

To achieve maximum battery capacity, BlueDriver should be fully charged before its first use. While this battery will normally charge in about 2 1/2 hours, please allow 4-5 hours for this first charge. Connect the power supply cable to the mini USB connector on your BlueDriver to charge the battery. The red LED will flash to indicate that

the battery is charging, once charging is complete, the LED will turn off.

If the battery becomes completely discharged for an extended period of time, the red LED will not flash until it can begin its charge cycle. This may take several minutes.

If the power cable is connected when the unit is shut down, the blue LED will stay lit. If the unit is in use, the blue LED will indicate the current connect mode.

Feel free to use your BlueDriver while it is charging.

Pairing your BlueDriver

Your devices are now ready to be paired. See Bluetooth Wireless Technology on **page 5** for pairing instructions.

Bluetooth Wireless Technology

Bluetooth Status LED

The blue LED on the side of the unit flashes in different sequences to indicate the current connection status.

Pairing Mode

In *Pairing Mode*, any Bluetooth wireless technology enabled device within range can pair with your BlueDriver. To put the unit in *Pairing Mode*, press the **<Connect Button>** for **6** seconds. The blue LED will flash rapidly at a rate of **100ms off, 100ms on**. Once the pairing process is complete the unique device ID is stored in Connection History. Subsequent connections can be made automatically from *Idle Mode*.

Idle Mode

To connect from *Idle Mode*, hold the **<Connect Button>** for **2** seconds. Upon release, the blue LED will flash at a slow rate of **2 secs off, 200ms on**. In *Idle Mode*, BlueDriver searches for paired devices.

Connected Mode

After bonding is complete, the blue LED will flash at a slower rate of **2 secs off, 1 sec on (2 secs off, 4 secs on for HD Voice)**. The connection to that device is secure.

Note: If you put the unit into the wrong state due to releasing the **<Connect Button>** at the wrong time, please start over from the **powered-off** state.

Bluetooth Wireless Technology

Pairing to a Cell Phone with Bluetooth Wireless Technology

When you're first connecting to a new device, you should be in an environment with no other *Bluetooth* wireless technology enabled devices within range that might also be in *Pairing Mode*.

1. Set the **<Headset / Phone Switch>** to the *Phone* position.
2. From the **powered-off** state*, hold the **<Connect Button>** on the BlueDriver for at least **6** seconds. Upon release, the blue LED should flash rapidly as the BlueDriver enters *Pairing Mode*.
3. On your phone, search for

* Holding the **<Connect Button>** for **5** seconds while in the **powered-on** state will power off the BlueDriver.

Bluetooth wireless technology devices. If this is the first time you have paired with this device, select the option to add an audio device. When the cell phone has found the new device, select from the list the device ID of 'JKBDRVM3xxxx' where xxxx = the last four digits of the serial number.

4. Enter the pin number as '0000' if requested
5. When bonding is complete, the blue LED will flash at a rate of **2** seconds *off*, **1** second *on* (**2 secs off, 4 secs on for HD Voice**). Once BlueDriver-M3 has been added to your cell phone, subsequent connections can be made more quickly from *Idle Mode* by holding the **<Connect Button>** for only **2** seconds before releasing.

Bluetooth Wireless Technology

Pairing to a Headset with Bluetooth Wireless Technology

When you're first connecting to a new device, you should be in an environment with no other *Bluetooth* wireless technology enabled devices within range that might also be in *Pairing Mode*.

1. Set the **<Headset / Phone Switch>** to the *Headset* position.
2. Following manufacturer's instructions, set your headset to *Pairing Mode*.

Note: Connecting via Bluetooth wireless technology varies with different cell phones.

3. From the powered-off state, hold the **<Connect Button>** on the BlueDriver for at least **6** seconds. After you release it, the blue LED should flash rapidly if the BlueDriver is in *Pairing Mode*.
4. When bonding is complete, the blue LED will flash at a rate of **2** seconds *off*, **1** second *on* (**2 secs off, 4 secs on for HD Voice**). Subsequent connections can be made more quickly from *Idle Mode* by holding the **<Connect Button>** for only **2** seconds before releasing.

Note: If left unused in *Idle* or *Pairing Mode*, the BlueDriver will automatically disconnect the Bluetooth connection in two minutes and power off.

Bluetooth Wireless Technology

Disconnecting from a Device

To disconnect from any *Bluetooth* wireless technology enabled device and turn the power off, simply hold the **<Connect Button>** until the blue LED turns off (approx. **5** seconds).

Connection History

BlueDriver retains a history of the 16 most recent devices. To clear connection history and return to factory default, with the BlueDriver powered off, set the switch to the **<Headset>** or **<Phone>** position, then hold the **<Connect Button>** in for at

least **20** seconds. After resetting, the BlueDriver will return to *Pairing Mode*.

Reconnecting to Paired Devices

To reconnect to a device that is in **Connection History**, the BlueDriver should be in *Idle Mode* (see **page 4**) and will automatically connect to a paired device that is within range.

When reconnecting to your cell phone, the BlueDriver should be set to **<Phone>**. For Bluetooth headsets, the BlueDriver should be set to **<Headset>**.

Wireless Applications

1. Take Calls During a Live Event or Remote Broadcast

Simply plug BlueDriver-M3 into any mic level input of your mixer or console. Pair to your cell phone and get ready to take calls as you normally would. This setup allows voice band bi-directional audio from your cell phone.

The mini cable provided with your BlueDriver allows you to connect an aux output of your mixer to the SEND jack on the BlueDriver M3. This signal goes back to the caller, so make sure you don't send the Caller's voice back to the caller. See **page 13** for a Mix-Minus setup.

Wireless Applications

2. Receive A2DP Audio from your Cell Phone, Music Player, or Laptop into your PA

Simply plug the BlueDriver-M3 XLR into any mic level input of your PA system. Pair the BlueDriver in **<Phone>** mode to your cell phone, music player, or laptop computer and enjoy full bandwidth Bluetooth A2DP audio from your web conference. A2DP is a one-way transmission, with nothing coming back on the return channel. Therefore you won't be able to send A2DP audio to your laptop.

Be aware that the standard A2DP music profile includes a 150 millisecond transmission latency.

Wireless Applications

3. Bluetooth Headset as a Talkback Intercom

Need a short range point-to-point intercom during your next live event? Simply plug BlueDriver-M3 into any mic level input of your mixer or console. Pair to your favorite Bluetooth Headset (View our Facebook page for a Discussion on our headset recommendation). This setup allows voice-band bi-directional audio up to 30 feet from the BlueDriver.

The mini cable provided with your BlueDriver allows you to connect an aux output of your mixer to the **<Send>** jack on the BlueDriver-M3. This signal goes back to the headset, so make sure you don't send your voice back to yourself. See **page 13** for a "Mix-Minus" setup.

Wireless Applications

4. Send A2DP Audio to your Bluetooth Enabled Speakers or Headphones

Forget the XLR jack and jump right to the 3.5 mm socket. The **<Headset>** mode of BlueDriver-M3 connects to Bluetooth headphones or wireless speakers, and transmits full bandwidth Bluetooth A2DP audio.

Simply connect the supplied cord between the **<Send>** mini jack on your BlueDriver-M3 and the line level or headphone output jack of your audio source, then pair to your Bluetooth headphones or speakers. A2DP is a one-way transmission, with nothing coming back on the return channel.

Be aware that the standard A2DP music profile includes a 150 millisecond transmission latency.

Wireless Applications

Broadcast High Quality Audio Through Our Wireless Link

Our BlueDriver-F3 (<Headset> mode) and BlueDriver-M3 (<Phone> mode) can be paired together to create a full A2DP music bandwidth wireless link. Range is limited to 40 feet, but this may be just enough for your application. A2DP is a one-way transmission, with nothing coming back on the return channel.

Be aware that the standard A2DP music profile includes a 150 millisecond transmission latency.

Mix-Minus Setup

'Mix-Minus' Setup

On whichever input channel you have the BlueDriver-M3™ connected, turn the corresponding Aux or FX control to minimum. All other input channel Aux controls should be at their desired settings for the “Mix-Minus” feed returning to the BlueDriver-M3™.

Connect the FX Send output to the Send input on the BlueDriver-M3™. The FX Send output will send all audio except the caller audio.

The Aux or FX Send bus is completely separate from all other outputs, so these Aux controls will not affect what is heard on the Main outputs or on any other Aux or FX buses.

FAQ's

What is the range of the transmitter/receiver?

BlueDriver-M3 transmits and receives audio signals up to 50 feet from your Bluetooth wireless technology enabled device. The maximum range of this product is achieved when a clear line of sight is maintained between connected devices, but may also be limited by interference due to the environment. While this product offers extended range capabilities, maximum usable range is limited by the weaker of the two paired/connected devices. Transmitting signals over longer distances will require more power, therefore you should keep BlueDriver-M3 as close as possible to your Bluetooth device to conserve battery power.

Why won't the BlueDriver pair with my phone?

If this is the first time you are trying to pair to this cell phone, you might be in *Idle Mode* instead of *Pairing Mode* and your BlueDriver-M3 is not being recognized. To reach *Pairing Mode*, hold the **<Connect button>** in for a full 5 seconds.

Why won't BlueDriver connect to my device?

Ideally, the master device will search for the slave device. If the BlueDriver isn't pairing with your device, try turning the second device on first from your initial attempt to connect.

Why doesn't the BlueDriver change connections when I move the switch from *Headset to Phone*?

If you change this switch while the unit is on, you will need to power the unit off (see **page 7**), then power the unit back on before the change takes effect.

How long does it take to recharge the battery?

BlueDriver-M3 can fully charge the internal battery in about 2 1/2 hours. These batteries do not have a "charging memory" and they can be recharged at any time without changing their life expectancy.

How long will the charge on the battery last?

Based on tests with BlueDriver-M3 about 1 meter from a *Bluetooth* wireless technology enabled device, the battery should last for about 10 hours under normal use. As an indicator of low battery, the blue LED will grow dim and then extinguish a short while before the battery is completely exhausted and the unit shuts down.

How do I replace the battery in this unit?

This is not a user replaceable battery. Please contact JK Audio or a factory authorized service center for battery replacement.

Technical Information

Input

Connection: 1/8" (3.5 mm) stereo

Impedance: 20k ohms

Level: -10 dBu nom.

Output

Connection: 3 pin male XLR

Impedance: 1.1k ohms

Level: -34 dBu nom.

Bluetooth Wireless Technology

Standard: Bluetooth 3.0

Range: 66 feet (20 meters)

HF = full duplex voice
300 Hz - 3.4 kHz

Frequency Response: **HF (HD)** = full duplex HD Voice
50 Hz - 7 kHz

A2DP = 30Hz - 17 kHz
End-to-End Latency = 150 ms

Misc

Power: 120-240 VAC

Supply: 5V DC, 50 ma

Connector: Mini-USB Series B

Battery: Internal Lithium-Ion
Polymer rechargeable

Dimensions

Size: 1.1" x 4.4" (2.8 cm x 11.2 cm)

Weight: 2.1 oz (60 g)

Safety Precautions

This unit should only be charged at temperatures of 0° - 45°C (32° - 113° F).

Operating temperatures for these devices is -10° to 60°C (14° to 140°F). When not in use, they should be stored as -20° to 45°C (-4 to 113°F) to prolong battery life.

While BlueDriver was designed to be very rugged and durable, it is not waterproof and care should be taken to keep the unit dry.

Battery Information

BlueDriver contains a rechargeable Lithium-Ion battery. These batteries do not have a “charging memory” and can be recharged at any time without changing their life expectancy. All rechargeable batteries have a limited life and will gradually lose their capacity to hold a charge. This loss of capacity is irreversible. To get the most from your BlueDriver, the battery should not be allowed to fully discharge. If this unit is not in use, the battery should be recharged at least every 90 days. The Lithium-Ion battery in this device is not user replaceable. Please contact JK Audio or a factory authorized service center for battery replacement.

Master(Phone) or Headset Mode

BlueDriver will first attempt to connect using the Hands-Free profile, allowing 3.4 kHz (7 kHz if HD Voice is available on your phone) telecom bandwidth for a mono full-duplex connection. If the Hands-free profile is not available, BlueDriver will attempt to connect in A2DP stereo streaming mode.

Difference between Profiles

A2DP (Advanced Audio Distribution Profile): Used for stereo music streaming.

Headset: Facilitates mono, full-duplex audio between two paired devices.

Hands-Free: Similar to Headset profile, but allows the receiving device more control over the call, such as volume, accept/reject/end a call.

Declaration of Conformity

Manufacturer's Name: JK Audio, Inc.
Manufacturer's Address: 1311 E 6th Street
Sandwich, Illinois 60548 USA

Declares that the product:

Product Name: BlueDriver M3™ Wireless Audio Interface
Model Numbers: BlueDriver M3

Conforms to the following Product Specifications:

Safety: AS/NZS 60950.1:2003
CAN/CSA-C22.2 No. 60950-01-03
UL Standard 60950-01 1st edition
Nemko-CCL File Number NA201010004

ESD: EN 55024:1998; EN 61000-3-2; EN 61000-3-3

Emissions: EN 55022:2006
AS/NZS CISPR 22 (2002)
FCC Part 15, Subpart B
ICES-003

Bluetooth Radio: EN 300.328
FCC Part 15.247
FCC ID QOQWT32AE
IC 5132A-BGTWT32AE

Declaration of Conformity

The product herewith complies with the requirements of the following Directives and carries the CE marking accordingly:

LVD 2006/95/EC (Safety)
EMC 04/108/EEC (EMC)
RoHS Directive 2002/95/EC

The Technical File containing supporting documentation is maintained at:

FCC Part 15 Compliance

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with

the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense. Changes or modifications not expressly approved by JK Audio can void the user's authority to operate the equipment.
